

# AgileWorks

IoT Platform for Energy Optimisation & Centralized Monitoring

## Centralized Monitoring

• Global Enterprises • Distributed Facilities

AgileWorks enables central monitoring of energy use patterns and equipment health from single dashboard for hundreds of offices of an enterprise. Event driven alerts enable management by exception and adherence to global benchmarks.

Prepared by

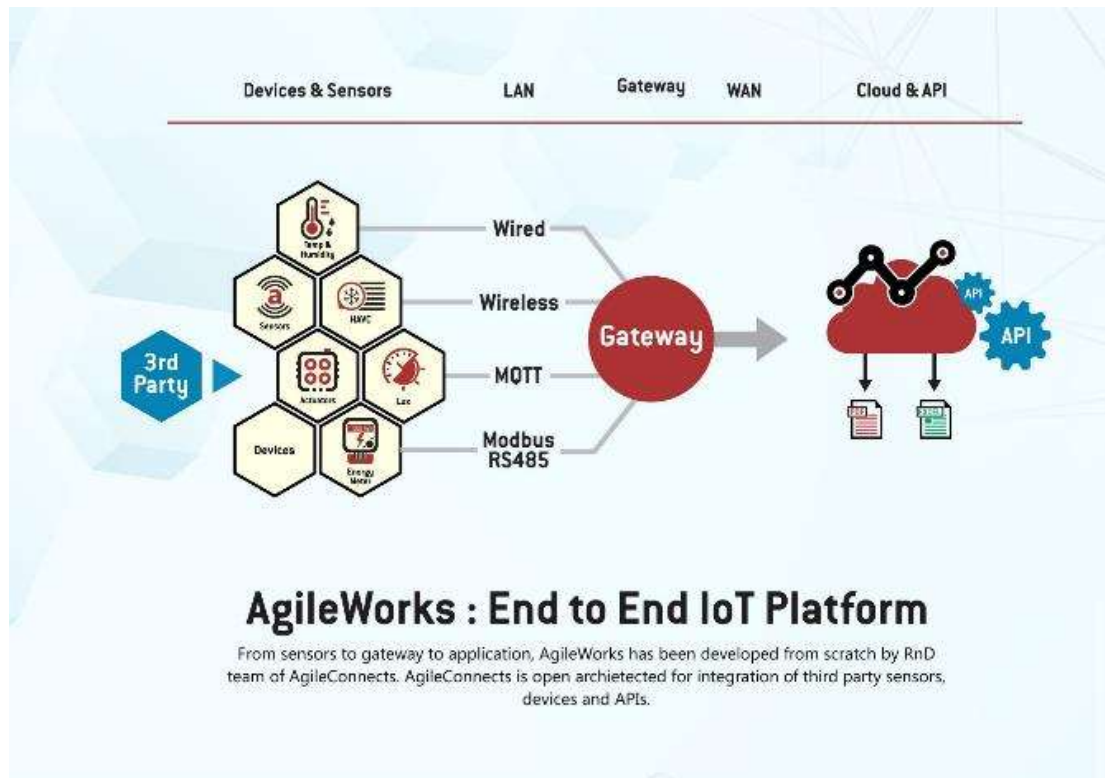

Nitin Nistane

08Nov2019

## Vision Statement

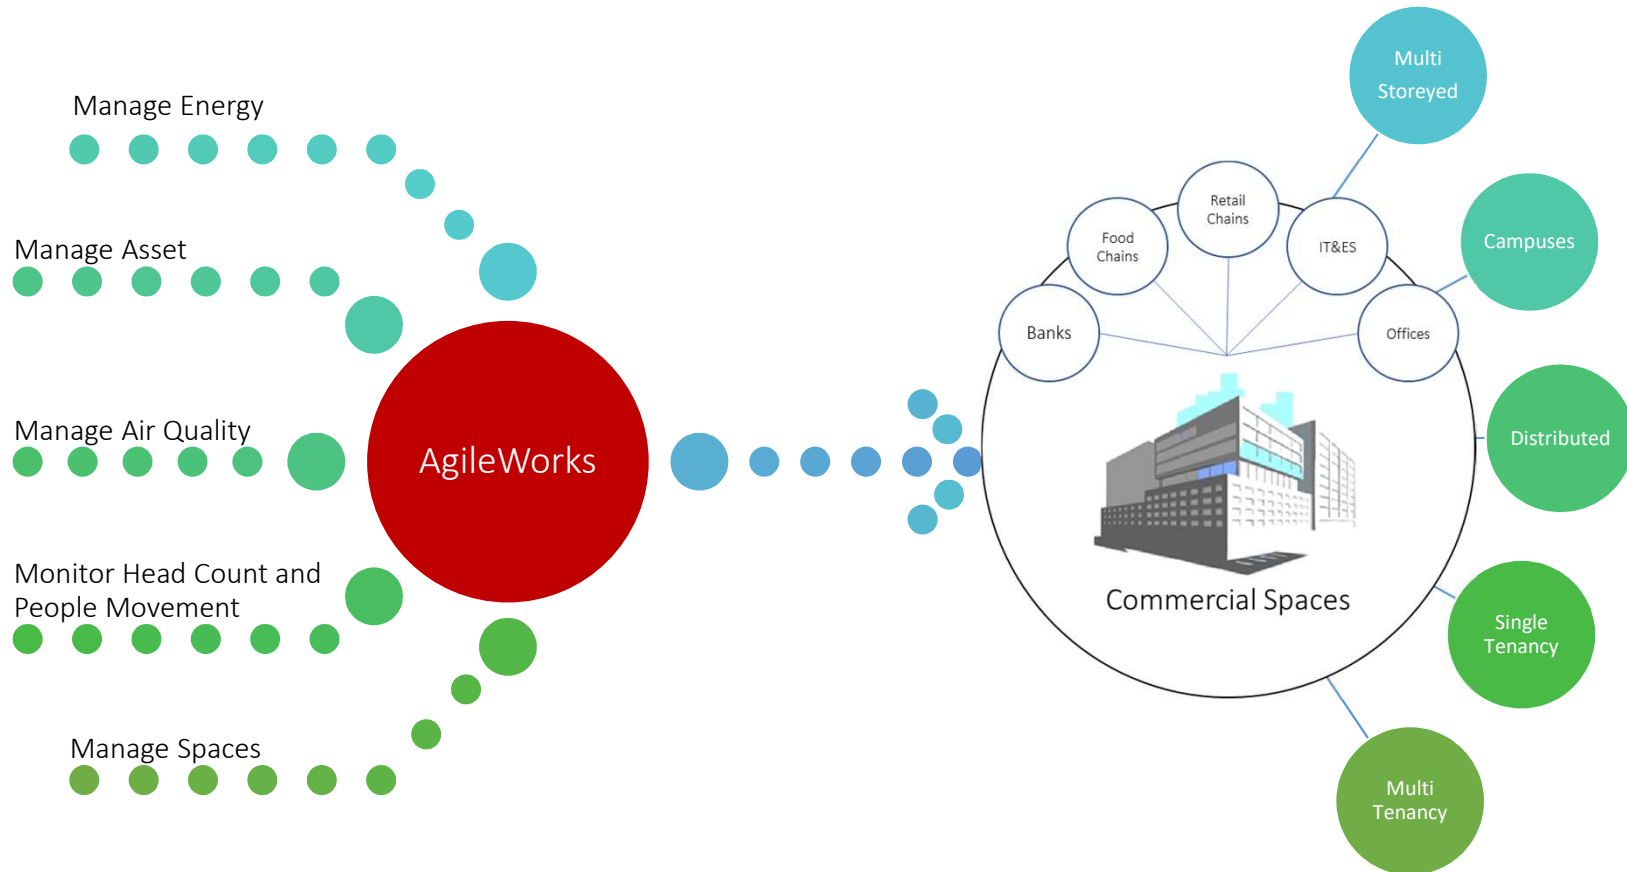

Be a recognised Internet-of-Things (IoT) technology provider with focus on commercial buildings to deliver

- Energy Savings and use pattern
- HVAC Automation and Asset Monitoring
- Sensor data monitoring: Temperature, Humidity, CO2, PIR
- People demographic and head count (Work in progress)
- Other equipment automation and monitoring: DG Set, Water Management, Lighting (Work in progress)

RoI < 1 Year from Energy Saving Alone	Asset Performance Monitoring	Integration with third party sensors and middleware
Non Intrusive	Non Disruptive	Dynamic Scheduling

# IoT for Commercial Spaces

Own Chiller Own AHUs	Central Chiller Own AHUs	BTU Metering Compatible
Distributed Premises	Single Tenancy	Multi Tenancy

## Business Value

### Monitor & Control

- HVAC, Chillers, Freezers, Façade lighting, Other Powered devices
- Dynamic Schedules
- Air Quality: CO2
- Air economizer and demand ventilation
- Smart Energy Metering with 16 energy quality parameters and use patterns

### Energy Saving

- Energy savings on HVAC operations
- Less than 1 year RoI
- Energy savings is due to
  - Dynamic schedules
  - Presence activation and
  - Absence deactivation

### Asset Performance

- Error and status codes
- Alerts on Temperature breach
- Alerts on Energy benchmark breach
- Alerts on device failure
- Analytical report for energy use patterns
- Analytical reports on equipment use pattern

Full Play WiFi • Advanced algorithms • Real life savings exceeds 10%

## AgileWorks

- Complete HVAC range:
  - Splits
  - Cassettes
  - Ductables
  - VRV/VRF
  - Chillers AHUs & Fan Coils
- Designed for small, mid sized and large:
  - Commercial spaces
  - Corporate & Government
  - IT&ITES

## Case Study: Future Retail

**FUTURE RETAIL**

4744 - Big Bazaar, Kandiwali

Daily Area report being mailed to Area Manager:

- Daily Energy consumption per store by load type
- HVAC Equipment Status at every store
- Manual overrides at every store
- Local Min and Max weather temperature

Daily Store report being mailed to Store Manager:

- Daily Energy consumption
- HVAC Equipment Status
- Equipment Errors indicating service needs
- Manual overrides at store
- Temperature maintained at various zones
- Local Min and Max weather temperature

Consistent above 10% energy saving

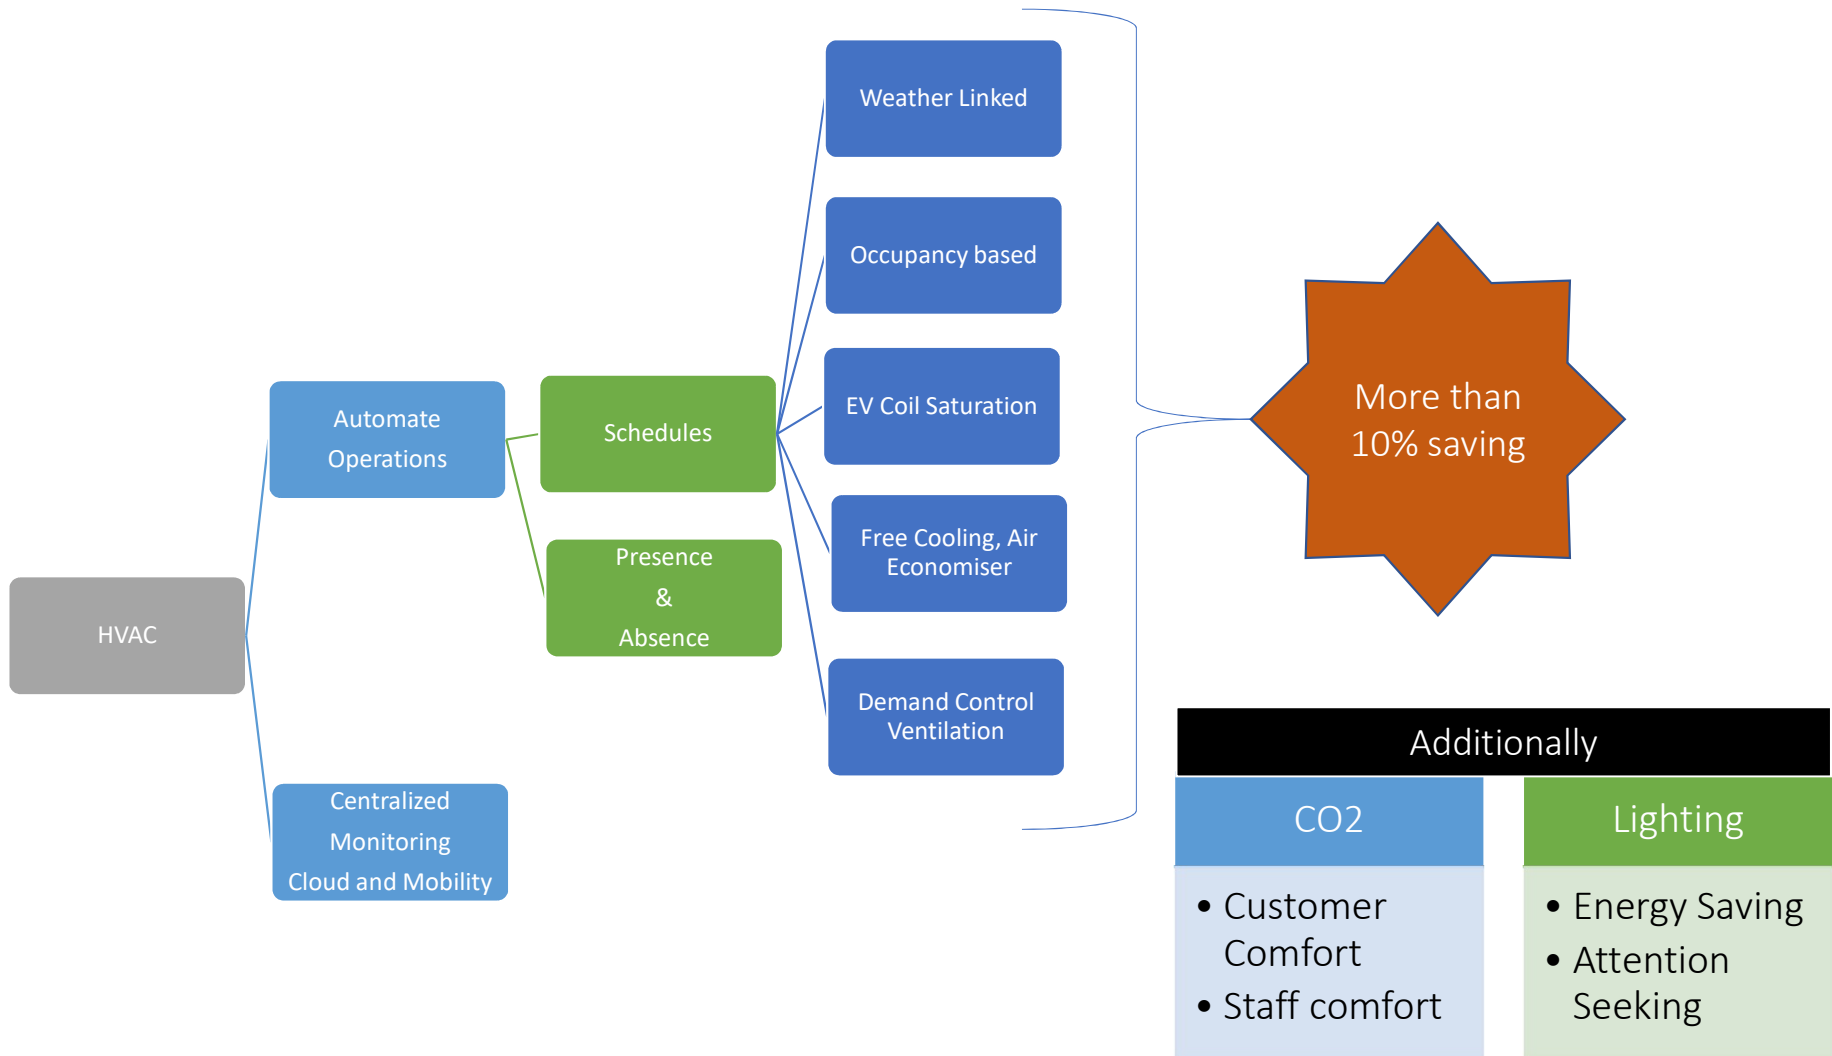

Recommendation: Service equipment to get rid of HP/LP faults and redraw new baseline of consumption

## AgileWorks Features

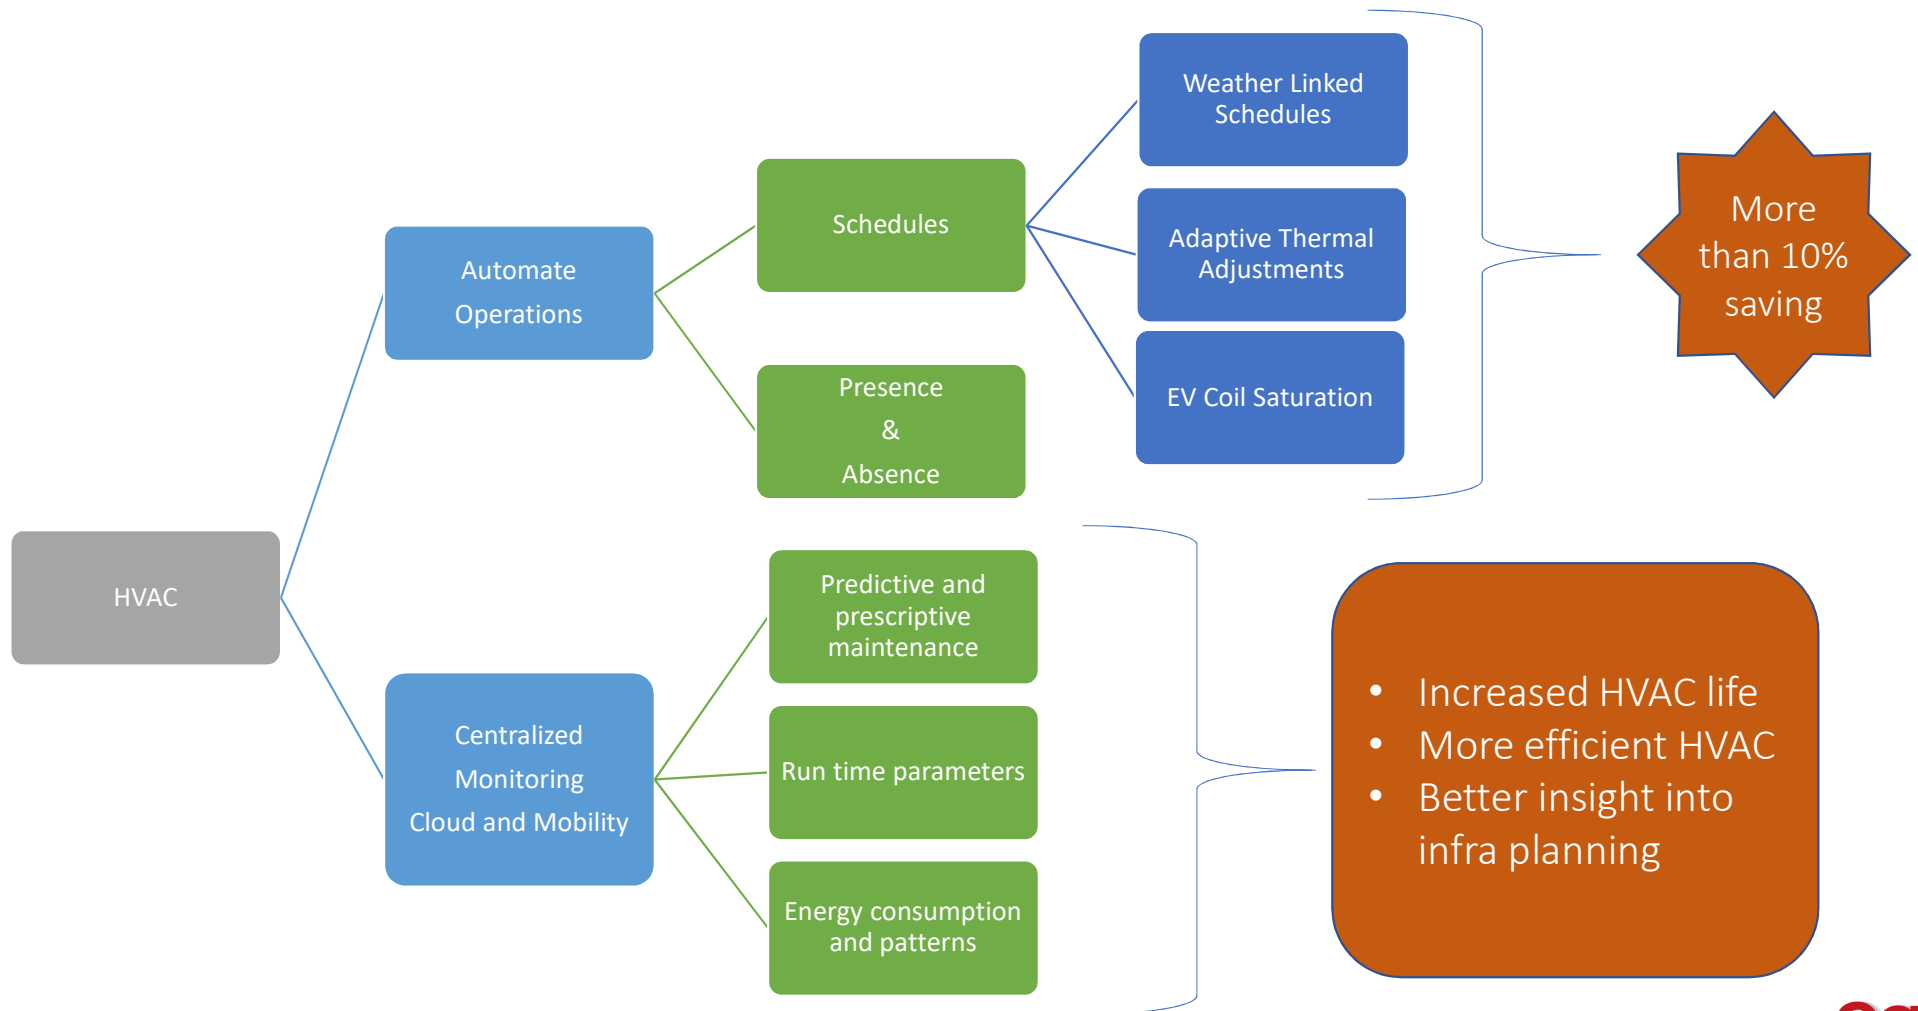

- HVAC Operation Automation
- HVAC Asset Monitoring
- Air Quality Monitoring

## H V A C Automation

## Centralized Monitoring

## Energy Monitoring from Cloud:

Daily energy consumption for the month with intelligent predictive algorithm

Alert on exceeding daily benchmark

Local temperature: min, max and real feel

## Cloud Snapshots

## Energy Monitoring from Cloud:

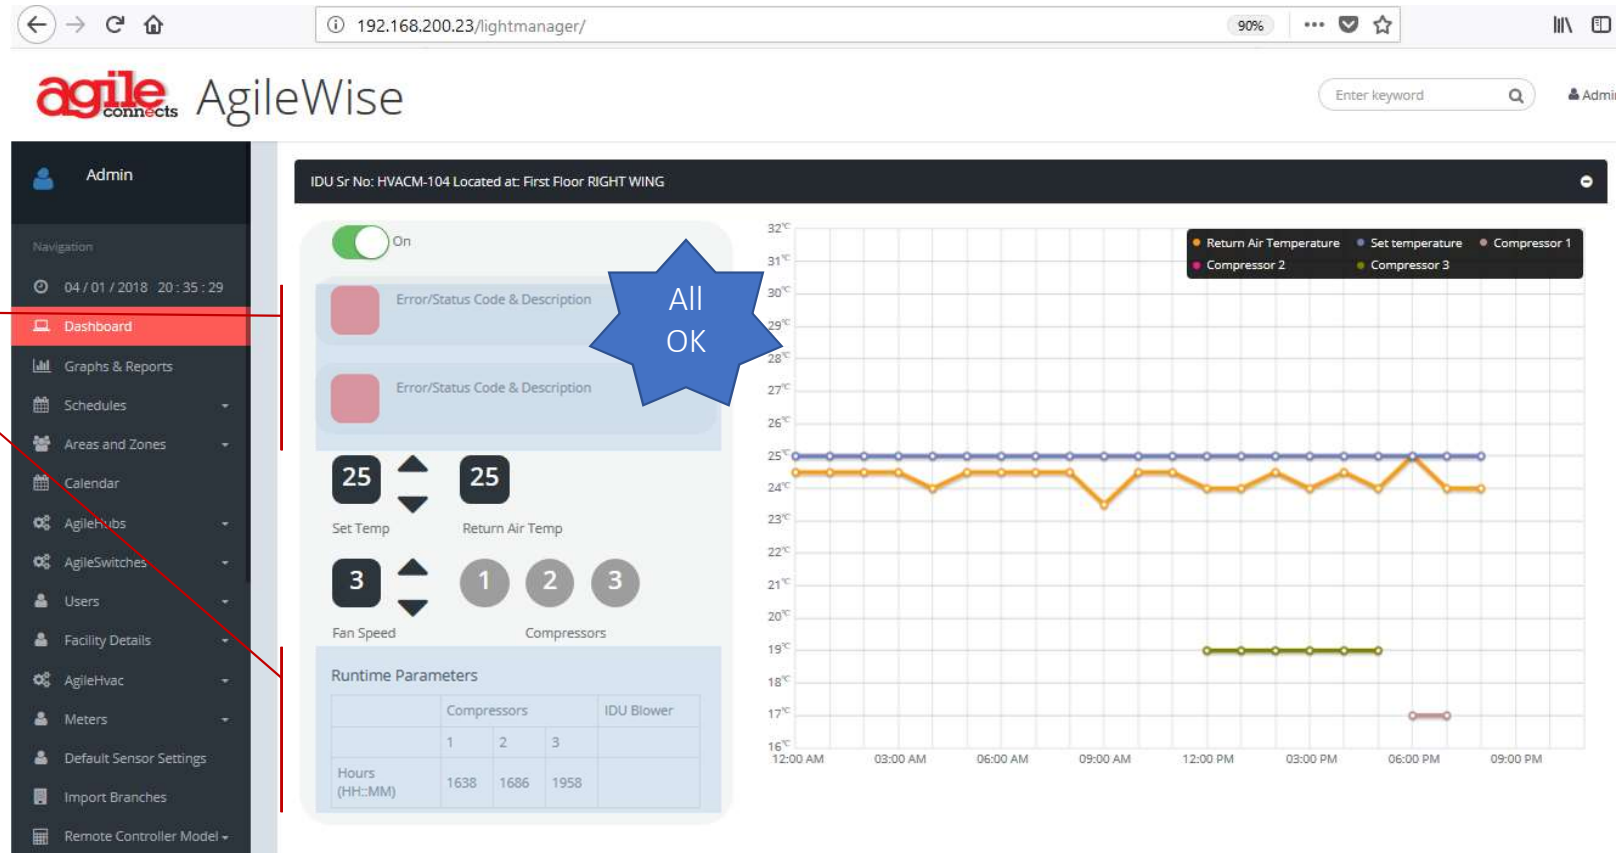

- Hourly energy consumption
- Key power quality parameters viz. PF, Hz, Voltages and currents

## Remote Control on Web

### HVAC monitoring & Control

#### Key AC Health Parameters:

- Overrides
- Error Codes: HP, LP, SPPR
- Compressor run hours
- Blower Run hours
- Time to Next service
- Alert on malfunction

# Remote Control on Mobile

## HVAC monitoring & Control

### Mobile App

## Recognitions

### Industry Recognition

**MITCON Technology Business Incubator**  
 • Promoted by : Department of Science & Technology,  
 • Supported by : Ministry of Micro, Small & Medium Enterprises,  
 Govt. of India, New Delhi.

#### Letter of Support

I, Mr. Chandrashekar Shankarrao Bhosale, son of Mr. Shankarrao Shamrao Bhosale, in my capacity as Head of MITCON Technology Business Incubator being funded by Department of Science & Technology (DST), Govt. of India, have examined the request of Anand Aurangabadkar, Director of Agile Connects Private Limited to validate the nature of business and after due examination, I recommend that the business being pursued by the applicant is innovative in nature and may therefore be considered as a business covered under the definition of Startup as per the notification no. G.S.R. 180(E) dated February 17, 2016 (F. No. 5(91) / 2015-BE.I).

The detailed reasons for the recommendation are provided in the annexure to this letter.

*Chandrashekar*  
Mr. Chandrashekar Shankarrao Bhosale  
Head  
MITCON Technology Business Incubator

Date : 02/01/2017

Place : Pune, Maharashtra

### Start-up India

#### AgileConnects : Enabling Commercial Establishments to Optimize Energy Consumption

Commercial spaces comprising of retail outlets, bank branches, food outlets, shopping complexes, offices, hospitals, warehouses, hotels and other commercial buildings have high energy requirements. HVAC (Heating, Ventilation, Air Conditioning, and Lighting) applications contribute to more than 70% of energy consumption in commercial spaces. HVAC clearly is the biggest impact area in our goal to be energy efficient.

AgileConnects, with offices at Mumbai, Pune, New Delhi, Nagpur and Bangalore, has embarked on a mission to get organisations to global benchmarks on energy consumption for green establishments. Headed by a team of seasoned professionals and serial entrepreneurs, this start-up has developed a robust platform - AgileWorks, which offer customers the opportunity to optimize energy consumption, thereby resulting in cost savings in commercial spaces. AgileWorks is a full play IoT platform that comprises of sensors, actuators, gateway and cloud application.

also communicates either on wire or wirelessly with in-premise gateway, AgileWise. AgileWise is capacitated for local decision-making based on weather conditions, date and time, user preferences and operating parameters of the connected equipment to arrive at efficient operating set points without compromising on user comfort. Another key component of the solution is AgileCentrum, a cloud-based application that allows central monitoring and configuration of software/firmware while delivering accurate analytical reports. AgileCentrum also archives data for future analysis. The gateway AgileWise, communicates with AgileCentrum in the cloud over multiple WAN technologies.

Built to deliver ROI in less than 12 months, AgileWorks also boasts of advanced features that enable detection of equipment capacities and readjustment of set point to prevent equipment overdrives. The non-disruptive architecture of the solution is an added benefit, which means no alteration to electrical cabling or electrical side of the equipment is required. Further, all the necessary parameters are monitored without any intrusion. AgileWorks is a completely software-driven solution that can go live within six hours of deployment. All updates and patches are distributed from the central cloud server to each sensor and actuators. The ease of implementation in retrofit implementations only adds to the client's advantage.

Ideal for commercial spaces anywhere between 2000sqft to 20,000sqft, AgileWorks has been rolled out in three large banks and its branches. Strengthened with a team of versatile consultants, AgileConnects brings in the ability to respond to any energy leakages in the system and suggest appropriate measures. Signing off, Arvind Khungar shared that AgileConnects has a comprehensive 3-year product development roadmap which will expand AgileWorks functionality to monitor elevators, escalators, communication racks, air side economizers and demand-controlled ventilation, peak load management and more. (R)

#### AgileWorks is a full play IoT platform that comprises of sensors, actuators, gateway and cloud application

Arvind Khungar, Chief Strategy Officer, AgileConnects takes us through the features of the solution. One of the first components of AgileWorks is AgileSense which is essentially a cluster of sensors and actuators that monitors everything from temperature and humidity to light levels, air quality and people movement. AgileSense is micro-controller-based software-controlled electronics with embedded advanced algorithms that controls and communicates with connected equipments through wired or wireless media. AgileSense

Arvind Khungar,  
Chief Strategy Officer
